Individual and innovative quality

Competence and partnership for customized solutions

Good products need outstanding raw materials. This applies for oils, fats and margarines just as much as for all other ingredients. We produce everything ourselves in MuttENZ based on the seeds to the final product. Every single stage of production is carried out with great care and audited on the basis of our certified quality assurance system according to IFS (higher level) and ISO 9001:2000.

All vegetable oils and fats are from traditional cultivation. We do not use any genetically changed raw materials. And we produce our oils only through heating and pressing. This allows us to offer you only the freshest of quality at a competitive price. We can also supply kosher products on request.

Florin AG offers «just in time» customized products that have been optimised for your production. A competent team advises you in purchasing, research and development. We place great store in maximum flexibility. We can thus produce small product batches for your individual recipes.

It doesn't matter whether you want to optimise production processes in which oils and fats are involved or develop new products, our research department provides competent support with the latest laboratory test methods, test series and experiments.

The requirements on our products are as diverse as their fields of use. We develop high-quality margarines and fats for various end products for our customers in the food industry. The type of refinement, be this selective hardening, fractionation or transesterification, essentially depends on your individual task.
